AI-Native Freight Invoice Automation for SAP Landscapes

Pluto-Invoice: AI Freight Invoicing

Freight Invoicing Still Stuck in a Pre-AI World?

Despite digital supply chains, freight invoicing remains manual, fragile, and expensive

Manual invoices causing errors and duplicates?

PDFs and emails slowing AP?

Collective invoices breaking workflows?

Costly EDI/API onboarding for suppliers?

VIM failing on new formats?

No charge-level freight cost visibility?

Introducing Pluto-Invoice: AI-Native Freight Invoicing for SAP

Because, why fix errors when AI prevents them?

Pluto-Invoice automates complex freight invoices using AI—reading, validating, and posting directly into SAP TM, BN4L, and S/4HANA, including collective invoices, with no carrier changes.

How Pluto-Invoice Works?

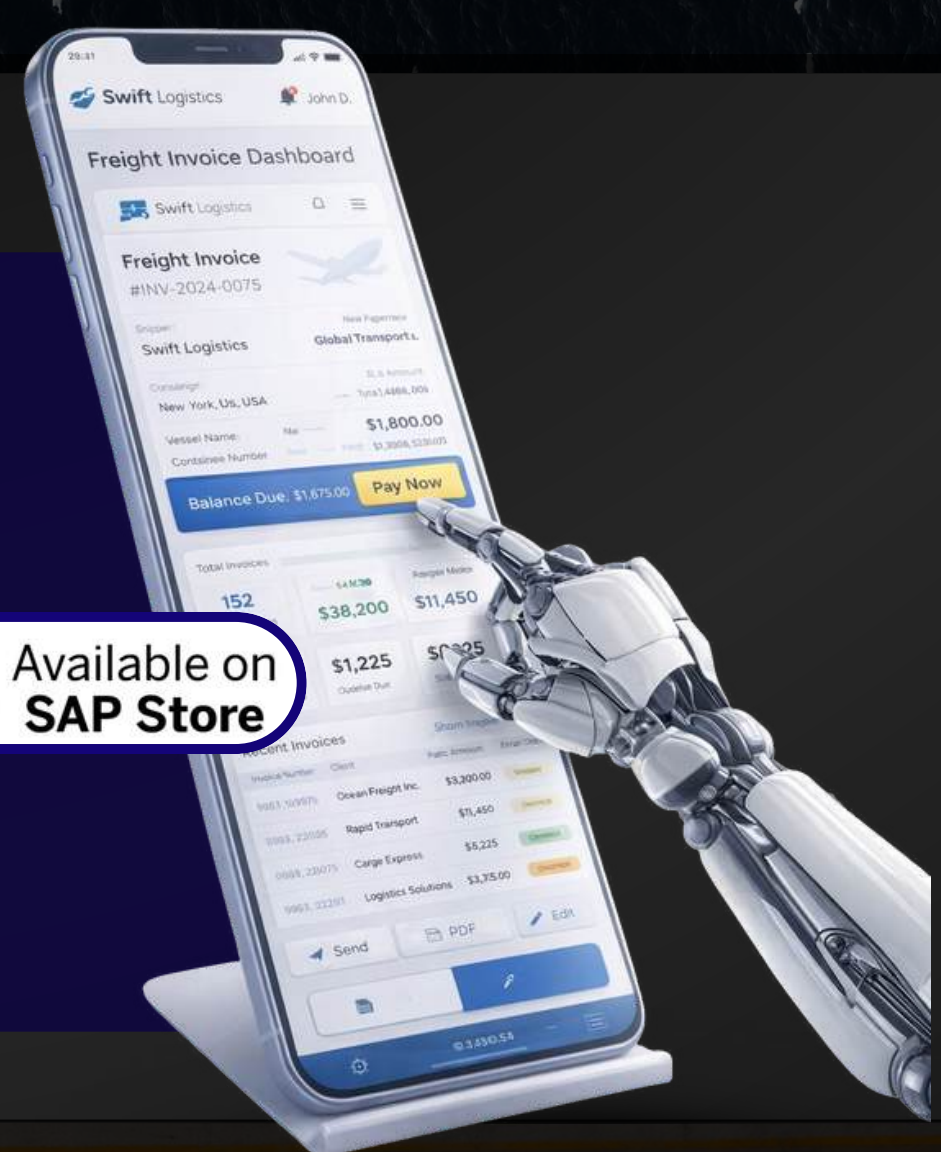

- Reads invoices from any format
- AI validates and auto-posts
- Handles collective invoices
- Zero EDI/API carrier changes
- Charge-level cost processing
- Early AI dispute detection
- Direct SAP TM / BN4L / S/4 posting
- Fast low-code deployment

Why Pluto-Invoice Is Different?

Pluto-Invoice is purpose-built for enterprises running SAP landscapes that want real automation, not incremental fixes. With AI-native intelligence, direct SAP integration, and zero-friction adoption, it transforms freight invoicing from a cost burden into a strategic advantage—without disrupting carriers, teams, or core systems.

Key Benefits at a Glance

Up to 90% reduction in AP effort

Faster invoice posting & shorter payment cycles

Elimination of duplicate payments and missed invoices

Granular freight cost transparency for better decisions

Early dispute detection, fewer downstream issues

Improved supplier relationships without onboarding friction

Lower TCO with faster deployments and minimal customization

SAP-Native Integration – Clean architecture without heavy middleware
